TBS Osteo™

TBS Osteo & DXA

Better Together

If you are managing patients at risk for osteoporosis, adding TBS to your DXA scans will enable you to identify up to **30% more patients** at high risk of fracture[1]

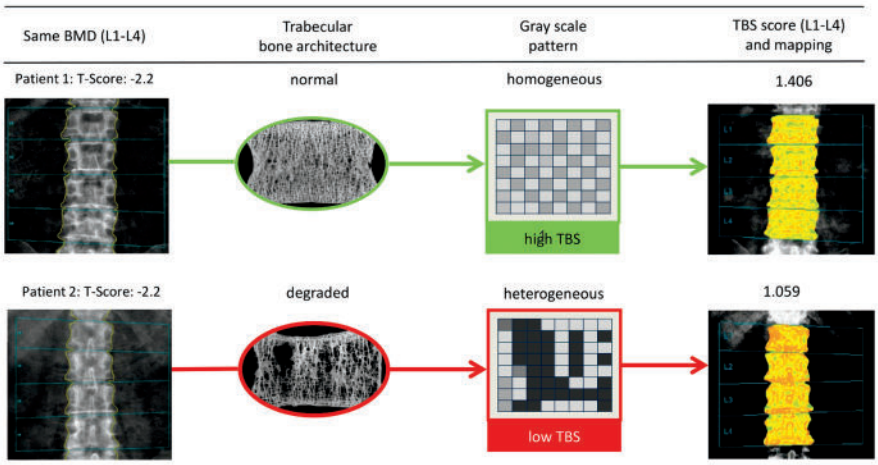
What is osteoporosis?

A silent systemic skeletal disease characterized by low bone mass and a micro-architectural deterioration of bone tissues leading to an increase in bone fragility and increased risk of fracture.

DXA + TBS = Density + Structure
BMD alone is just half the story

What is TBS (Trabecular Bone Score)?

TBS Osteo™, developed by Medimaps Group, is a state-of-the art software technology to evaluate bone micro-architecture in patients during a standard lumbar spine DXA scan, thus providing the missing link you need to identify more patients at high risk of fracture.



Know more with TBS

Figure 1: The TBS value is derived from an algorithm that analyzes the spatial organization of pixel intensity which corresponds to the differences in the X-ray absorption power of an osteoporotic bone versus a normal trabecular pattern[2]

Ordering TBS, What You Need to Know

Is TBS clinically validated?

- >1,200 published papers supporting TBS as a tool for evaluating bone quality.
- TBS Osteo™ has been FDA approved since 2014 as a complement to DXA analysis of the AP Spine to calculate a TBS score that can then be used in conjunction with other risk factors to diagnose osteoporosis and assess risk of fracture.[3]
- Over 3M TBS procedures worldwide.

Why should I order TBS with a DXA scan?

- 50% of fractures occur in the normal/osteopenic BMD zone.[4]
- Fine-tune therapy decisions and monitor changes in primary and secondary osteoporosis.
- No additional radiation or scanning required for TBS results.

Who qualifies for TBS?

According to ISCD guidelines, any patient eligible for a BMD study also meets the criteria for TBS.

What information will I receive?

Typically, you will receive an interpretive report from radiology that includes the patient's BMD results, as well as the TBS results of the AP Spine*. You may also receive FRAX® adjusted for TBS, BMD and the BMD T-Score adjusted for TBS.

*TBS results are only available for AP Spine
